PROFILE SUMMARY

B.Tech CSE (AIML) undergraduate with hands-on experience across the full Software Development Life Cycle (SDLC) — from requirement analysis and low-level design to development, testing, and deployment — through independently built full-stack applications using Agile, iterative development practices. Strong foundation in Data Structures & Algorithms, OOPs, and DBMS, with 250+ problems solved on LeetCode. Effective communicator, comfortable collaborating in team environments, translating complex, constraint-driven requirements into clean, efficient code, and documenting technical decisions for maintainability.

EDUCATION

Galgotias University — B. Tech CSE (AIML) CGPA: 8.38 / 10.0	2023 – 2027
Saraf Public School (CBSE) Senior Secondary: 86.5% Secondary: 94.8%	2021 – 2023

TECHNICAL SKILLS

- Languages:** Java, Python, ANSI SQL, JavaScript, HTML, CSS
- Core CS:** Data Structures & Algorithms, OOPs, DBMS, Operating Systems
- Databases:** MySQL, Database Design & Query Optimization
- Frontend:** HTML5, CSS3, React.js
- Dev Tools & Practices:** Git, GitHub, VS Code, Cursor, Agile/SDLC, Version Control

CORE COMPETENCIES

- Requirement Analysis & Clarification | Low-Level Design (LLD) | Test Scenario Design & Debugging
- Agile / SDLC Practices | Technical Documentation | Cross-functional Collaboration | Communication

PROJECT

StartupIQ — AI-Powered Startup Analysis Platform <i>Tech: Python, SQL, LLM APIs, React.js, Vercel</i>	Live Demo Feb 2026 – May 2026
- Analyzed business requirements and iteratively refined feature scope following Agile development practices, building a full-stack application end-to-end that uses LLM APIs to auto-generate structured startup analysis reports (SWOT, competitor benchmarking, MVP planning). - Created low-level design for the relational database schema and wrote optimized SQL queries for efficient storage and retrieval of report data. - Engineered JSON-schema-constrained prompt pipelines to enforce consistent, structured output from LLM API calls and handle malformed or edge-case responses. - Independently debugged and deployed the application, performing root cause analysis to resolve integration issues across the database, API, and UI layers, and maintained version control using Git throughout.	
BookMyEvent — Event Booking Platform <i>Tech: HTML, CSS, React.js, JavaScript, SQL, Vercel</i>	GitHub Repo Nov 2025 – Jan 2026
- Designed a low-level relational database schema (users, events, bookings) and wrote optimized SQL queries for transactional data storage and retrieval. - Integrated the Razorpay payment gateway API, handling secure key management via environment variables. - Built responsive React.js flows for event discovery, seat selection, and booking confirmation, incorporating feedback from peer code reviews. - Designed test scenarios and debugged the booking flow to ensure data consistency across concurrent transactions.	

CERTIFICATIONS & ACHIEVEMENTS

- Artificial Intelligence — Infosys Springboard
- Data Analytics & Visualization Job Simulation — Accenture
- Technology Job Simulation — Deloitte
- Data Structures using Python — Udemy
